Assignment 2 — E-commerce Site: Static, Responsive Pages

Name	**Muhammad Abdul Rehman Azhar**
Roll number	**FA24-BCS-058**
Course	CSC336 Web Technologies
Folder	`assignment-2/`

1. Task statement

Assignment 2 — Your E-commerce Site: Static, Responsive Pages
Difficulty: Easy–Medium · Covers: Lectures 5–10 (CSS Fundamentals through Responsive Design and Frameworks) · Folder: `assignment-2/`

Task: Build the static, responsive front page and product page of your e-commerce site, modeled on your chosen reference site. No JavaScript yet — this assignment is entirely about layout, styling, and responsiveness.

You must build:

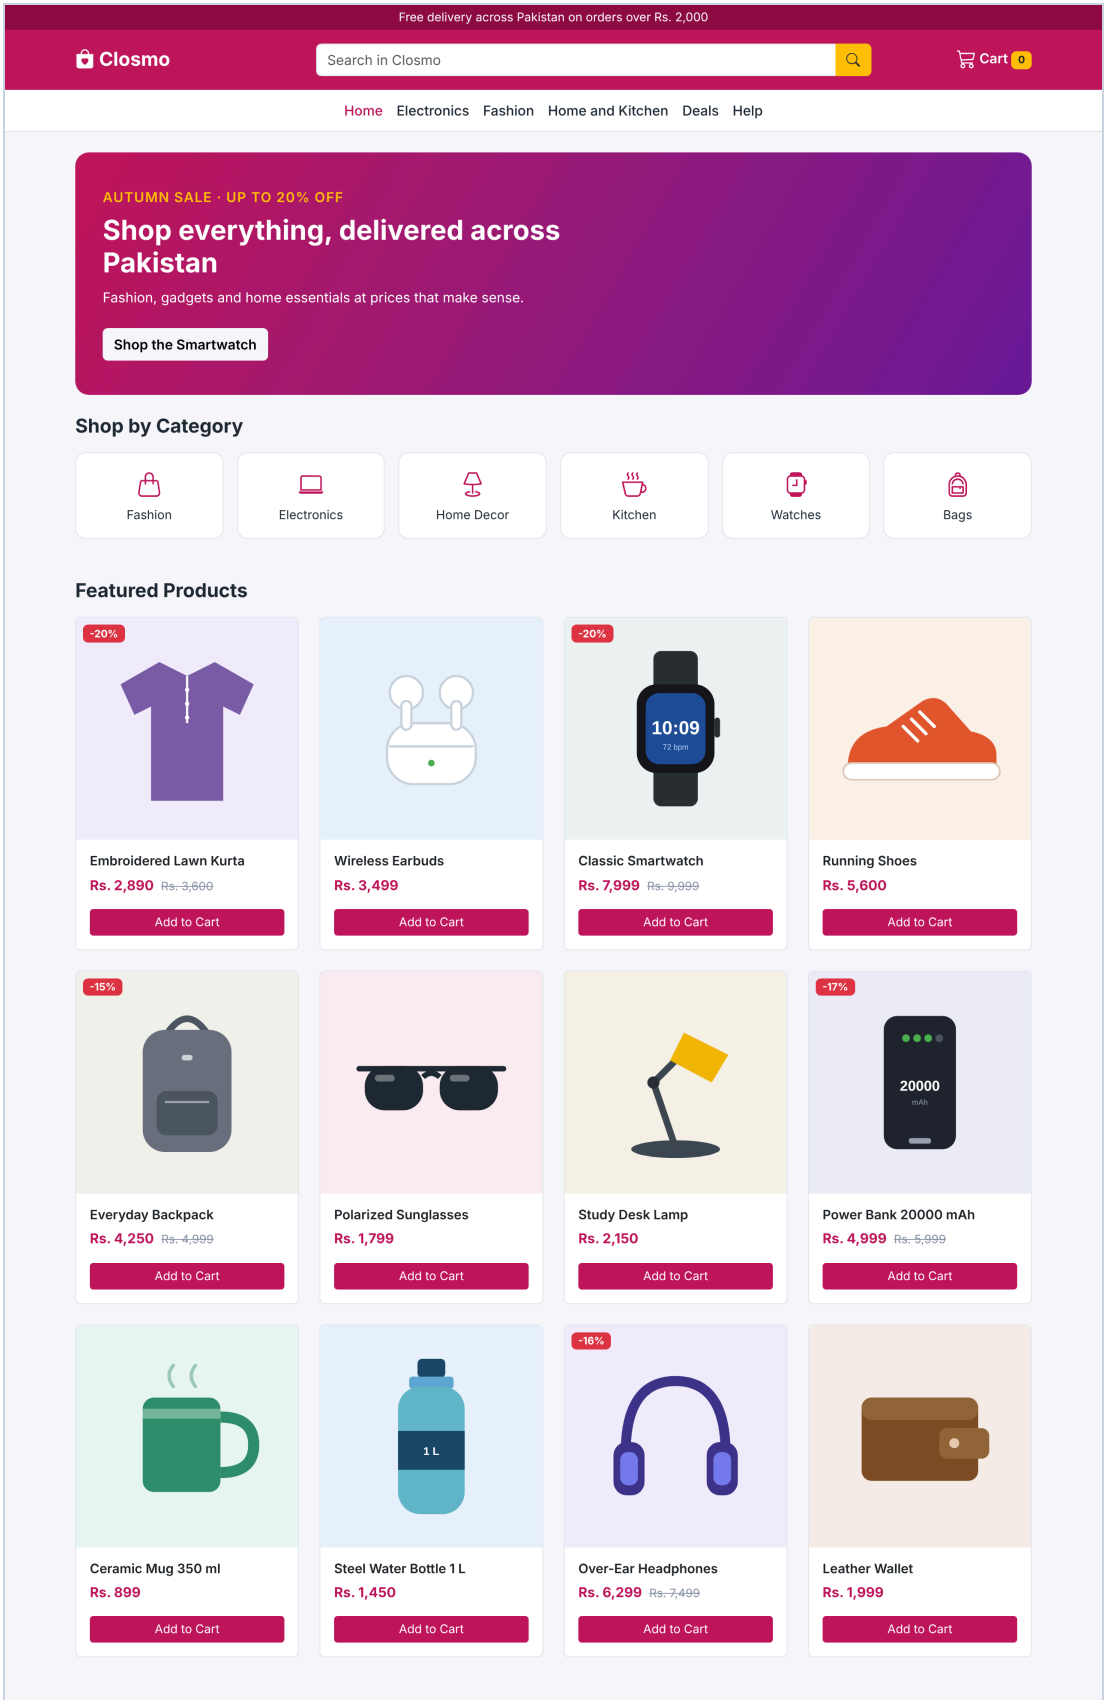

• A homepage / product listing page with a header (site name/logo, a nav bar, a cart icon that does not need to work yet) and a responsive grid of at least 8 product cards (image, name, price, an "Add to Cart" button that does not need to work yet).
• A single product detail page for one product: larger image, name, price, description, quantity selector, and an "Add to Cart" button (again, not functional yet).
• A consistent footer across both pages.
• The whole layout built with Flexbox and/or CSS Grid — no table-based layout, no absolute-positioning-everything.
• Genuine responsiveness: the layout must reflow sensibly at a phone width (~375px), a tablet width (~768px), and a desktop width, using media queries or your framework's responsive grid classes. Screenshot all three widths for your completion PDF.
• Either Bootstrap or Tailwind (your choice) used for at least the grid/layout and the navbar — this is the frameworks half of Lecture 10, and it should actually be doing real work in your layout, not just be linked and unused.

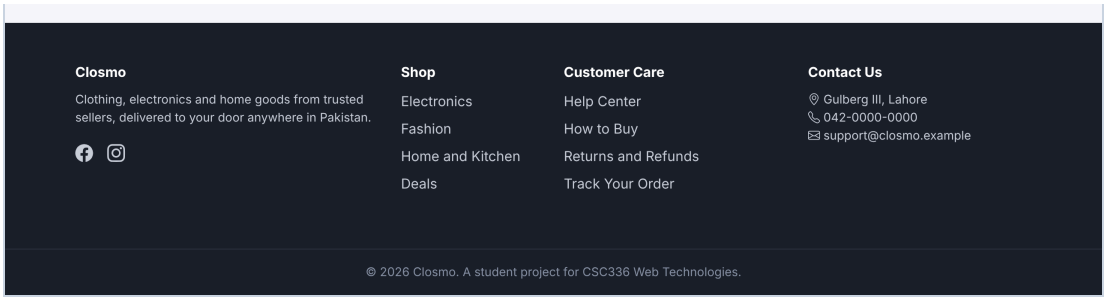

Deliverables in `assignment-2/`: `index.html`, `product.html`, your CSS (or framework config), a `README.md` with your reference site's name/URL/screenshot, and your completion PDF.

Reference site chosen: Daraz Pakistan (https://www.daraz.pk/), declared with a homepage screenshot in `README.md`.

2. Screenshots of the finished work running in a browser

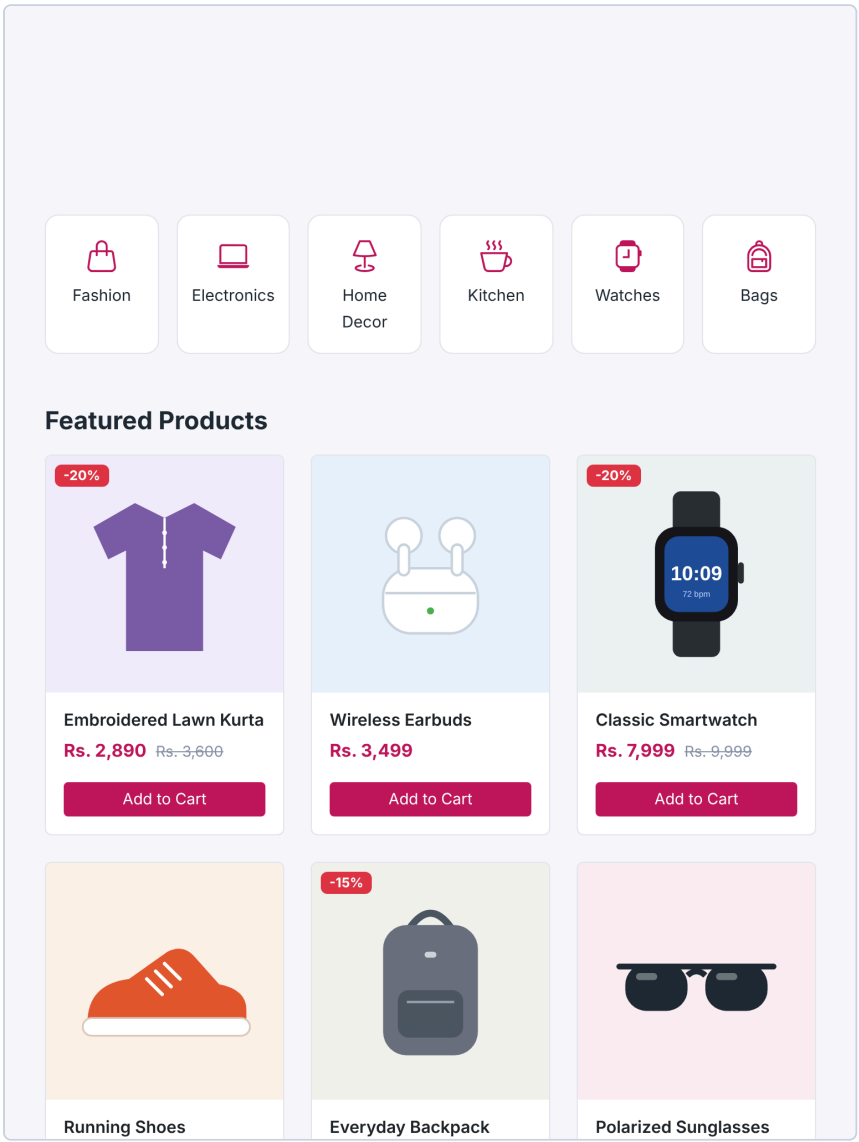

Homepage (index.html) — desktop, 1280px, full page

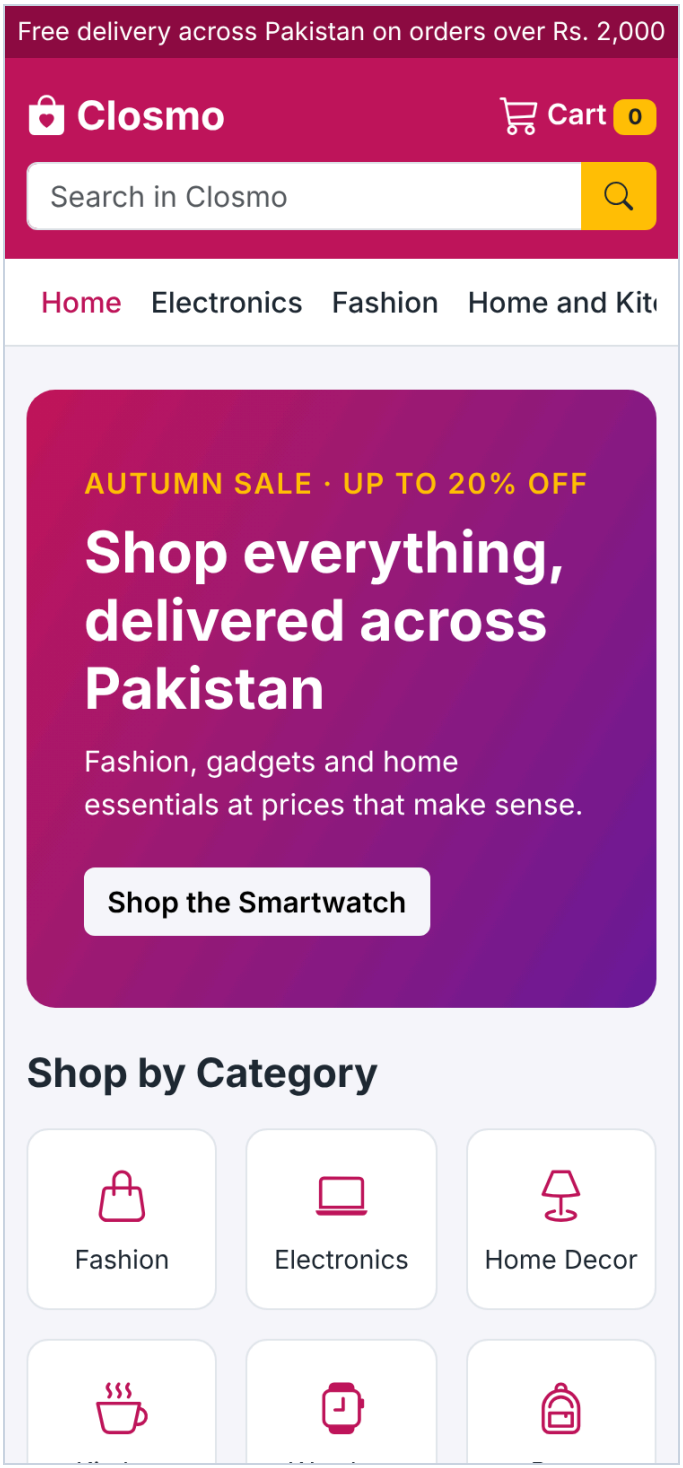

Header (logo, search, cart), Bootstrap navbar, sale banner, category tiles, 12 product cards at 4 per row (`col-lg-3`), footer.

Homepage — tablet, 768px

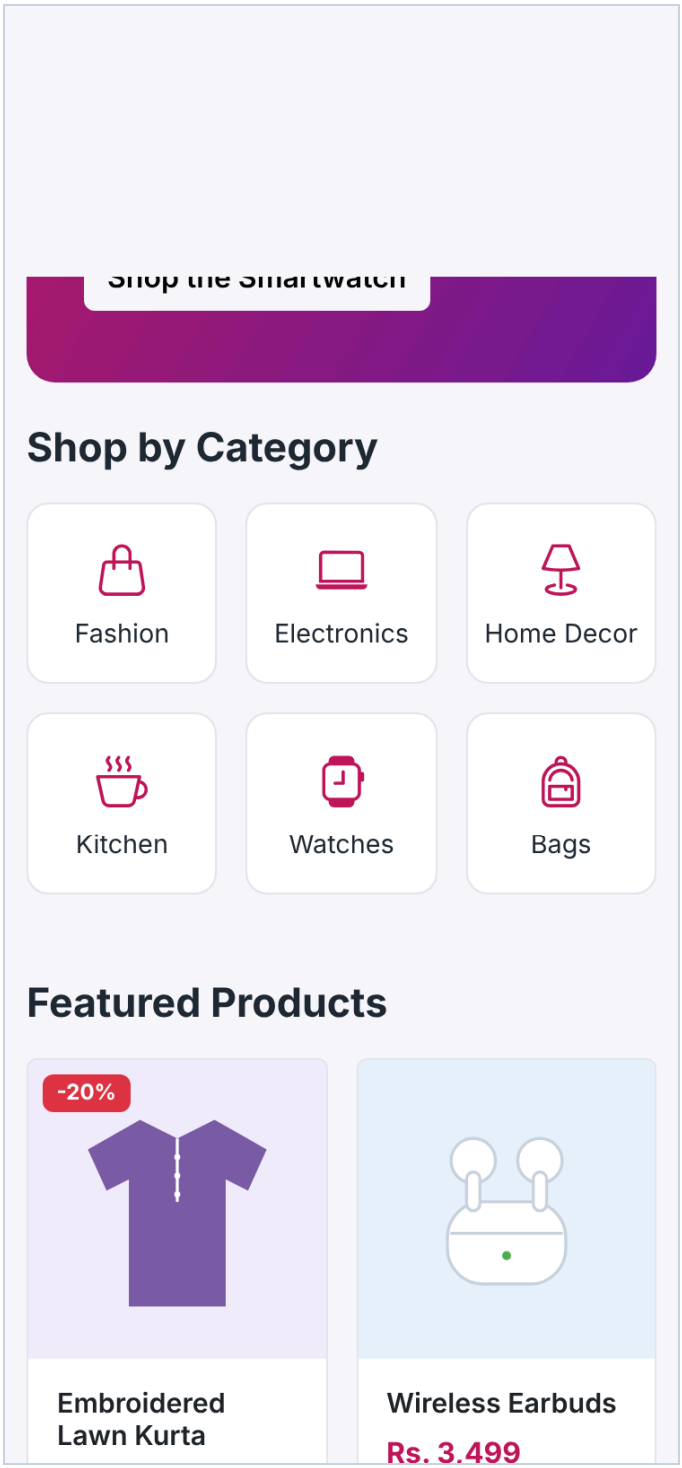

768 × 1024, scrolled to the products: 3 cards per row (`col-md-4`); logo, search and cart share one header row.

Homepage — phone, 375px

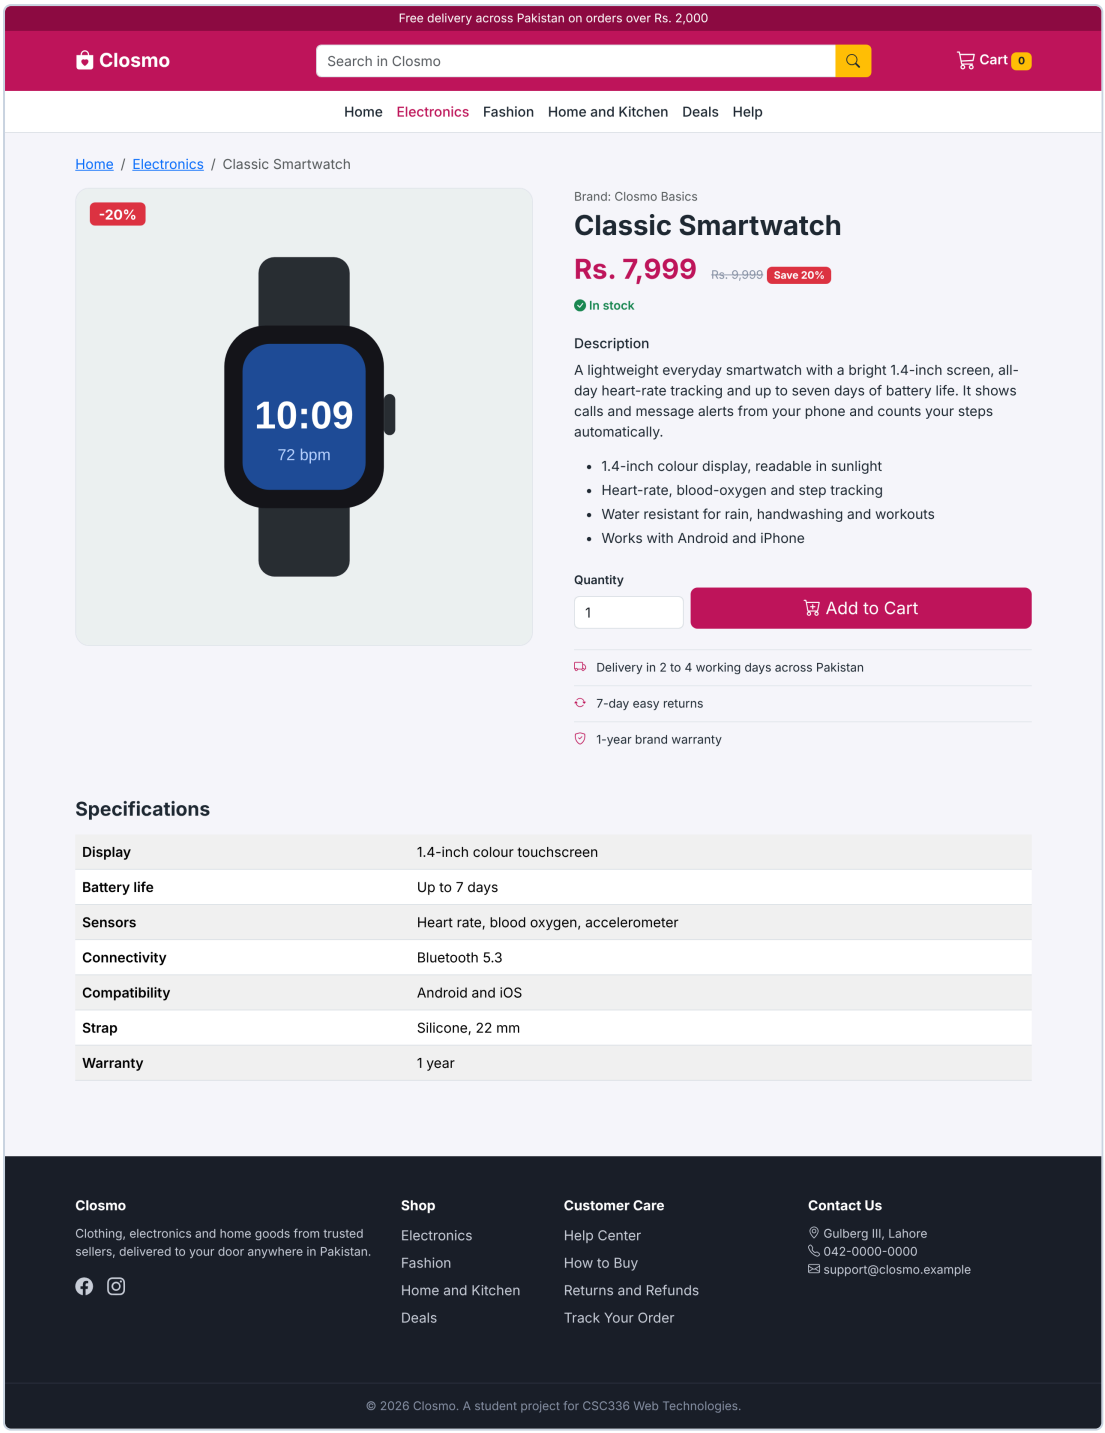

375 × 812, top: logo and cart on row 1, search full width on row 2; category links scroll sideways.

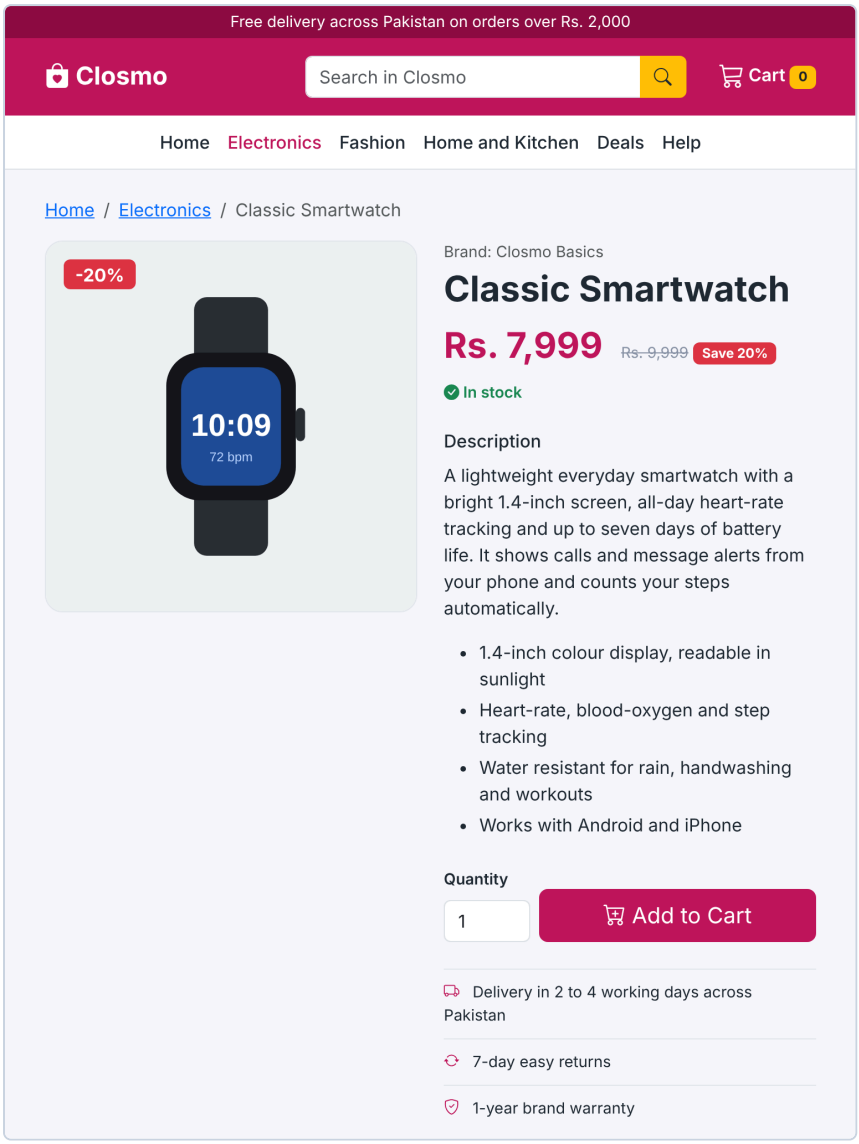

375 × 812, products: 2 cards per row (`col-6`).

Product page (product.html) — desktop, 1280px, full page

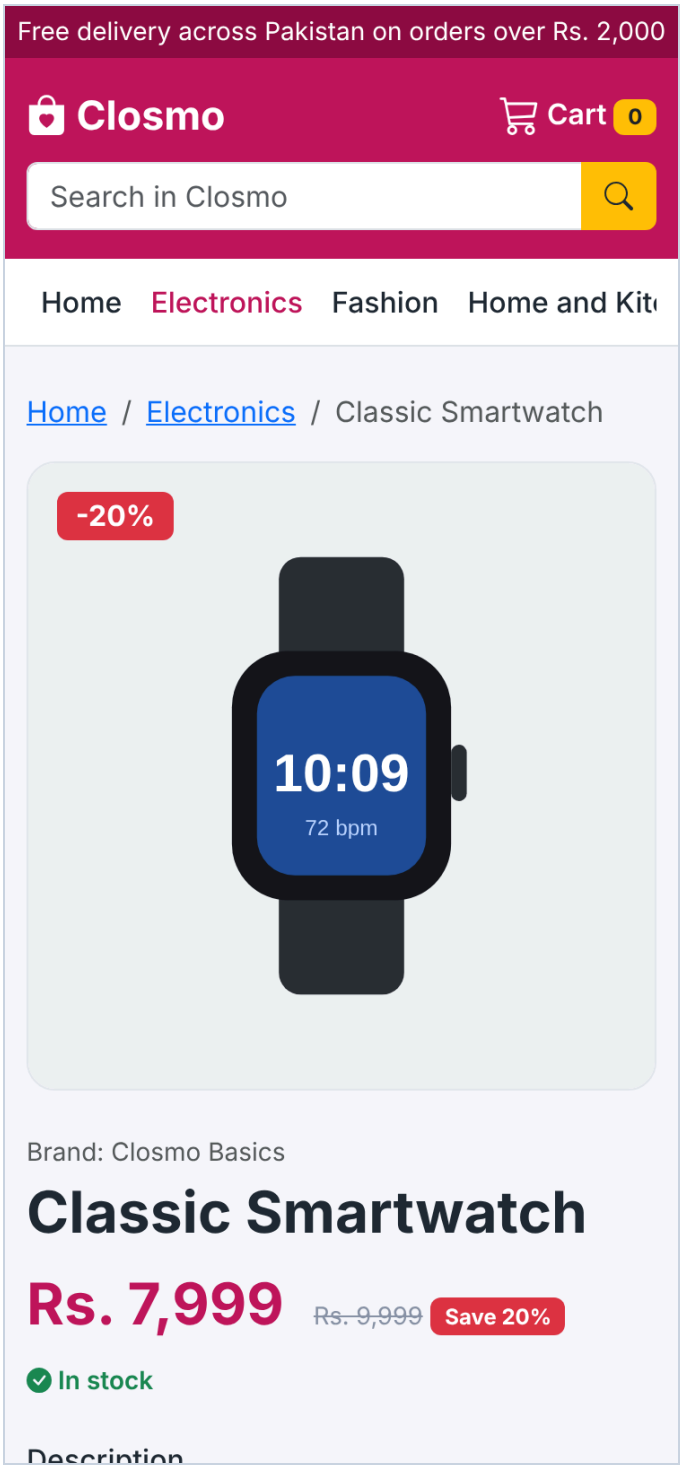

Same header and footer as the homepage. Large image and details side by side (`col-md-6`); quantity selector, Add to Cart, specifications table.

Product page — tablet, 768px

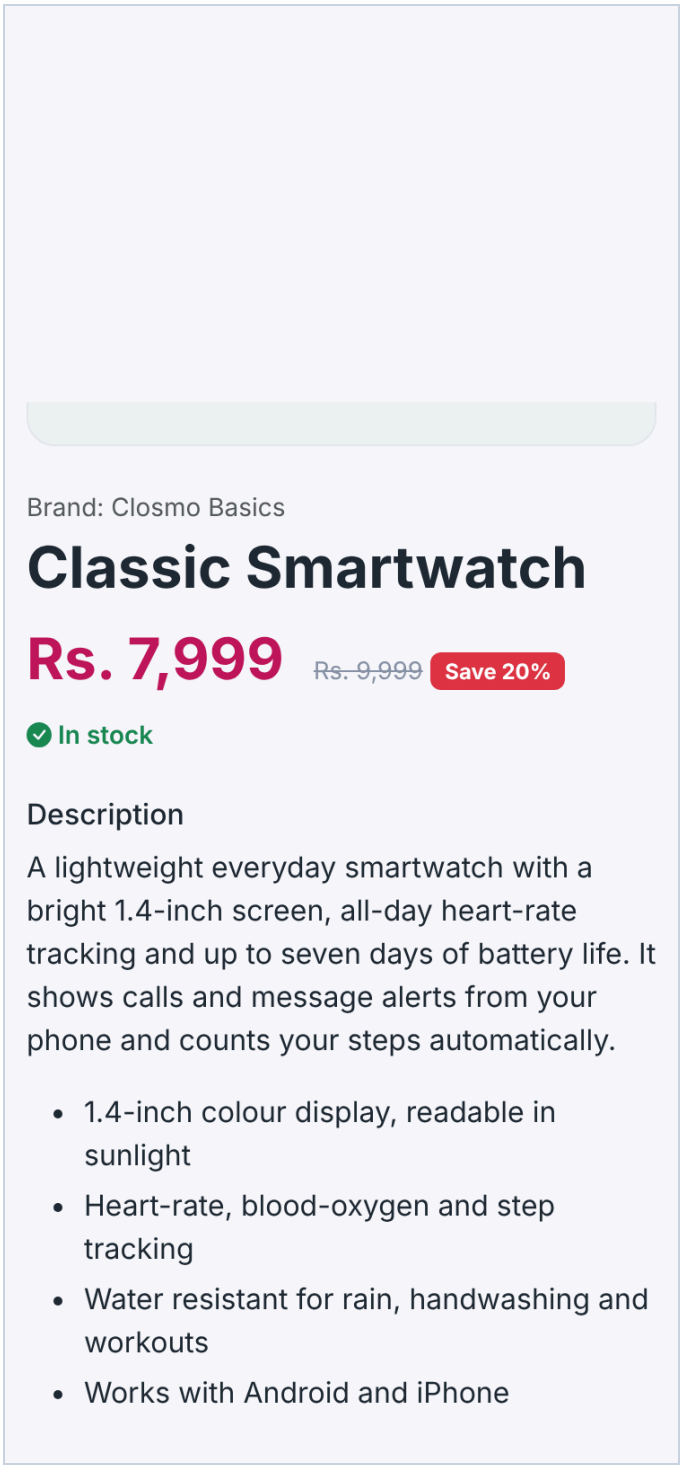

768 × 1024: image and details already side by side.

Product page — phone, 375px

375 × 812: the image stacks above the details (`col-12`).

375 × 812, scrolled: quantity selector (1–10) and Add to Cart.

3. Code

Framework: Bootstrap 5.3.3 CSS and Bootstrap Icons 1.11.3 from the jsDelivr CDN. No JavaScript is loaded on either page. Images: 12 SVG files in `images/`; `daraz-homepage.jpg` is the reference-site screenshot used in the README.

# Assignment 2 — Closmo: Static, Responsive Pages

**Student:** Muhammad Abdul Rehman Azhar (FA24-BCS-058) · **Course:** CSC336 Web Technologies

## Reference e-commerce site

- **Name:** Daraz Pakistan
- **URL:** https://www.daraz.pk/
- **Homepage screenshot:**

![Daraz homepage](daraz-homepage.jpg)

This same reference site is used for Assignments 3 and 4.

### What I modelled from it (layout and features only, no code copied)

- A header with the logo, a large search bar and a cart icon with an item count
- A row of category links under the header
- Product cards showing image, name, price, a struck-through old price and a discount badge
- A product page with a large image, price, description, quantity selector, Add to Cart, and delivery and
returns information
```

```
## Pages

| File | What it is |
| --- | --- |
| `index.html` | Homepage / product listing: header, sale banner, category tiles, 12 product cards, footer |
| `product.html` | Product detail page for the Classic Smartwatch: large image, name, price, description, quantity selector, Add to Cart, specifications table |
| `styles.css` | My own CSS on top of Bootstrap (brand colours, header, cards, footer) |
| `images/` | Product images (simple SVG illustrations) |

## How it is built

- **Bootstrap 5.3.3** (from the jsDelivr CDN) does the real layout work:
  - the 12-column grid (`container`, `row`, `col-*`) for the header, product grid, product page and footer
  - the navbar (`navbar navbar-expand`) for the category links
  - components: `card`, `badge`, `breadcrumb`, `input-group`, `table`
- **Bootstrap Icons** for the cart, search and small icons.
- **No JavaScript.** Bootstrap's JS bundle is not loaded. The navbar uses `navbar-expand`, so it never collapses and needs no hamburger script; on phones the link row scrolls sideways instead.
- The cart icon, search box, quantity selector and Add to Cart buttons are not functional yet (Assignment 3 adds JavaScript).

## Responsive behaviour

| Width | Header | Product grid (`col-6 col-md-4 col-lg-3`) | Product page |
| --- | --- | --- | --- |
| Phone (~375px) | Logo and cart on one row, search full width below | 2 per row | Image above details |
| Tablet (768px) | Logo, search and cart on one row | 3 per row | Image and details side by side |
| Desktop (992px+) | Same, wider search | 4 per row | Side by side |

12 products divide evenly into 2, 3 and 4 columns, so no row is left half empty at any width.

## How to run

Open `index.html` in a browser. An internet connection is needed for the Bootstrap and Bootstrap Icons CDN files.
```
