Lab 1 — Semantic HTML Scaffold

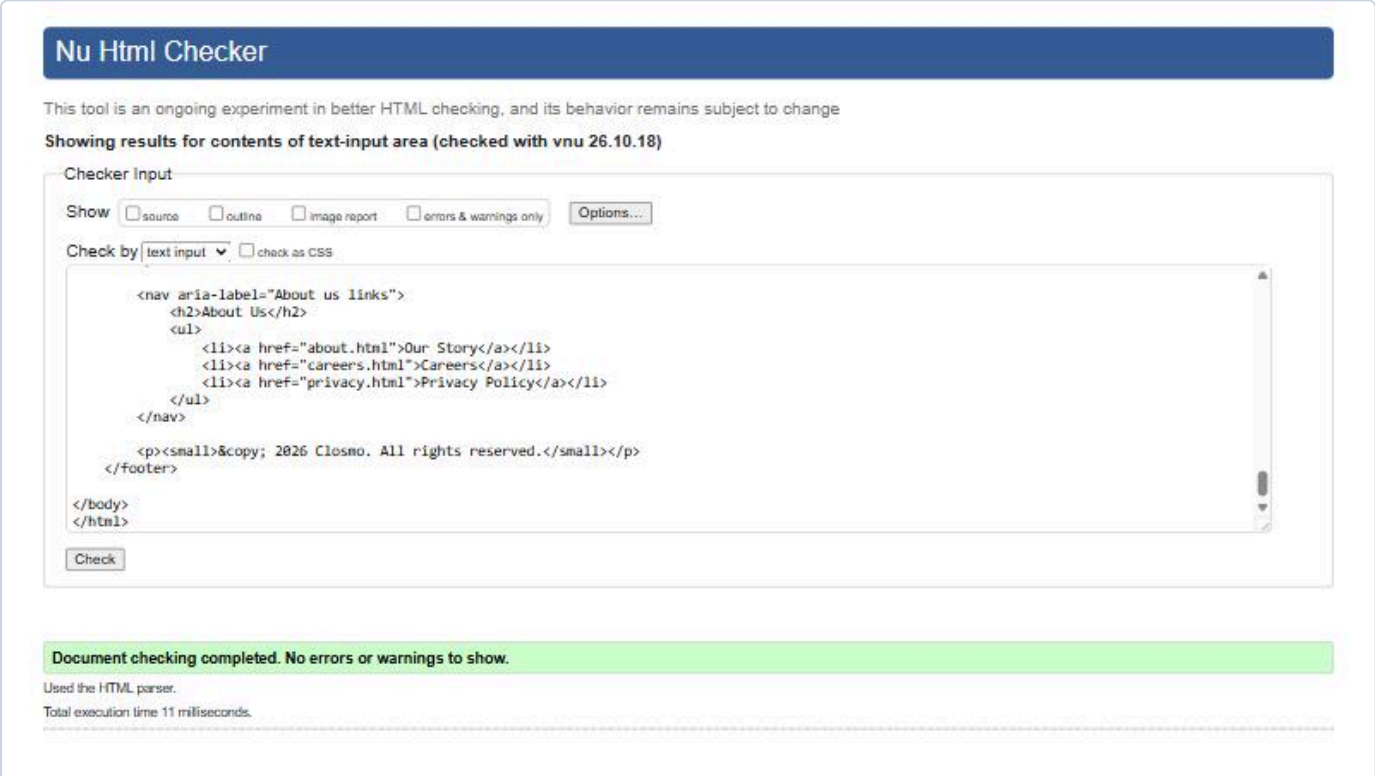

Name	**Muhammad Abdul Rehman Azhar**
Roll number	**FA24-BCS-058**
Course	CSC336 Web Technologies
Folder	`lab-1/`

1. Task statement

> **Lab 1 — Semantic HTML Scaffold**
> Difficulty: Easy · Covers: Lectures 3–4 · Folder: `lab-1/`
>
> Before you design your own CV in Assignment 1, practice the raw skeleton: build a semantic HTML5 skeleton (no styling required) for a generic e-commerce homepage — correct `<header>`, `<nav>` with at least 4 links, a `<main>` containing three `<section>`s (featured products, categories, newsletter signup), and a `<footer>` with at least three columns of links. Validate your HTML with the W3C Validator (https://validator.w3.org/) and include a screenshot of a clean validation result in your completion PDF.
>
> Deliverables in `lab-1/`: `index.html` and your completion PDF.

2. Screenshots of the finished work running in a browser

W3C validation result

validator.w3.org, Validate by Direct Input, with the full contents of `index.html`: “Document checking completed. No errors or warnings to show.” (Nu Html Checker, vnu 26.10.18, 24 Oct 2026)

The page in the browser (no styling, as the task requires)
